

Muhammad Azim Hadi Bin Ramlan

Data Analyst

+601139824108 / axim.hardy@gmail.com / Selangor, Malaysia / [Portfolio](#)

Career Summary

Results-driven Data Analyst with 2+ years of experience in data transformation, visualization, and process optimization. Expert in leveraging SQL, Python, and Power BI to extract insights from complex datasets, leading to a 15-20% increase in operational efficiency. Currently applying analytics to inventory planning and retail operations, with proven ability to use statistical analysis and business intelligence to solve real-world business challenges. IBM and Google Data Analytics certified (Coursera).

Core Expertise

Data Analysis & Visualization

- Advanced Power BI dashboard development
- Data modeling & quality assurance
- ETL processes & data transformation
- Business intelligence reporting
- Statistical analysis & predictive modeling

Business Acumen

- HR analytics & workforce metrics
- Process optimization & workflow automation
- Cross-functional collaboration
- KPI tracking & performance metrics
- Strategic recommendations

Technical Skills

- SQL, SQLite, Oracle (query optimization, complex joins)
- Python (Pandas, data cleaning libraries)
- Tableau, SAS, Excel (advanced formulas, pivot tables)
- Database management systems

Work Experience

Executive, Data Analyst

December 2025 - Present

MR. D.I.Y. Trading Sdn Bhd | Inventory Planning Optimisation (COA)

- Automate recurring inventory and planning reports using Python, SQL queries and Excel/Power Query, reducing manual preparation time and improving reporting consistency.
- Build and maintain Power BI dashboards to monitor inventory levels, stock turnover, and replenishment performance across a national retail store network.
- Analyse SKU-level sales and stock movement data using SQL and Python to identify slow-moving inventory, overstock, and stock-out risks, supporting demand planning decisions.
- Support inventory planning optimisation initiatives by developing reports that improve stock allocation, reorder accuracy, and distribution efficiency across stores and distribution centres.
- Collaborate with supply chain, and operations teams to translate business questions into data-driven insights and actionable inventory recommendations.

Administrative Assistant, Human Capital**Oct 2023 – Dec 2025***INCEIF University*

- Developed and maintained a digital expiry tracker for expatriate visas, processing 20+ renewals annually and ensuring 100% on-time submission, reducing last-minute rushes by 30%.
- Automated and optimized the teaching permit application process for 30+ lecturers yearly by implementing a pre-verification system, cutting approval delays by 20%.
- Engineered a standardized process for new hire medical checkups and internship recruitment, reducing hiring timelines from 5 days to 2 days through templated letters and centralized communication.
- Created pre-approved templates for official staff letters, reducing drafting time by 30% and ensuring consistency.
- Digitized and managed the archiving of staff records and contracts, cutting document retrieval time during audits by 50%.
- Analyzed and tracked submission rates for 150+ annual staff declarations, achieving a 95% submission rate through automated reminder systems.

Banking Customer Service Agent**Sep 2022 - Aug 2023***RHB Bank Berhad*

- Analyzed 500+ monthly customer inquiries to identify root causes, leading to the development of a call categorization system that improved resolution time by 25%.
- Tracked and visualized Customer Satisfaction (CSAT) scores to identify training gaps, contributing to the maintenance of a 98% service quality target through data-driven performance coaching.

Corporate Administrative Trainee**Apr 2022 - Jul 2022***Majlis Amanah Rakyat (MARA) Perak*

- Designed and implemented an asset tracking database for 500+ equipment items, maintaining 100% data accuracy and identifying 15% discrepancies in legacy records through validation audits.
- Developed automated departmental dashboards in Excel to track 20+ KPIs across 5 business units; automated weekly reporting using VBA, saving 10 hours per week.
- Analyzed participant engagement data for 8 corporate events, creating post-event reports with actionable recommendations that improved future attendance by 18%.

Education

Bachelor of Science (Hons.) Statistics**March 2020 – July 2022***Universiti Teknologi Mara Kota Bharu, Kelantan***Diploma in Mathematical Science****May 2017 - January 2020***Universiti Teknologi Mara Tapah, Perak*

Additional Certificates

Additional Certificates

- IBM Data Analyst Professional Certificate (Coursera)
- Google Data Analytics Professional Certificate (Coursera)
- Alex The Analyst Data Analytics Bootcamp
- K Youth Programme: Data Analytics Bootcamp (Excelerate)
- LinkedIn Certifications: SQL, Python, Excel & Pandas

Projects

BMW Global Sales Analysis (2010-2024) | [Project](#)

- Analyzed 5,000+ vehicle sales records across global markets using Python to identify sales trends and customer preferences over 15-year period
- Discovered 20% surge in electric/hybrid vehicle adoption post-2020, with i-Series achieving premium pricing as halo products
- Identified core models (5 Series, X3) driving 60% of total volume while M-Series commanded 45% price premium in performance segment
- Tools: Python, Pandas, Matplotlib, Seaborn, Statistical Analysis
- Strategic Impact: Provided data-driven recommendations for electrification strategy and regional product allocation

Bank Customer Churn Analysis & Retention Strategy | [Project](#)

- Processed 10,000 customer records to identify churn drivers, revealing 32% higher attrition in German market and multi-product customers showing 40% better retention
- Developed customer segmentation identifying high-risk profiles: single-product users with high balances and inactive members
- Created correlation framework showing geography, product count, and activity levels as strongest retention predictors
- Tools: Python, Pandas, Cluster Analysis, Customer Segmentation
- Business Value: Retention strategies targeting high-value segments projected to save \$2.3M in customer acquisition costs

Credit Card Fraud Detection System | [Project](#)

- Addressed highly imbalanced dataset (0.6% fraud rate) using strategic undersampling techniques to build effective fraud detection model
- Engineered features and applied RobustScaler to handle financial data outliers, identifying V4 and V11 as strongest fraud indicators
- Achieved high-precision fraud detection capable of identifying fraudulent patterns 3x faster than manual review processes
- Tools: Python, Scikit-learn, Pandas, RobustScaler, Imbalanced Learning
- Application: Framework for real-time transaction monitoring with tiered alert systems based on risk scores

Football Player Performance Analytics (2021-2022) | [Project](#)

- Analyzed 128 players across top European leagues with 107 performance metrics each, establishing position-specific benchmarks
- Identified top performers: Tammy Abraham (0.5 goals/90min) and Thiago Alcántara (89.6% pass completion) using comparative analytics
- Revealed tactical insights including defenders' increasing offensive contributions and youth players' significant playing time
- Tools: Python, Pandas, Performance Benchmarking, Comparative Analysis
- Scouting Application: Data-driven framework for player recruitment and talent identification across different positions

HR Employee Attrition Predictive Analysis | [Project](#)

- Processed HR dataset of 1,470 employees to identify attrition drivers, achieving 85% prediction accuracy using logistic regression model
- Discovered employees working overtime had 2.5x higher attrition risk, while those with higher income showed 3x lower turnover probability
- Created correlation matrix revealing strongest predictors: monthly income (-0.43), overtime (+0.35), and years without promotion (+0.32)
- Tools: Python, Scikit-learn, Pandas, Seaborn
- Business Impact: Provided actionable recommendations to reduce attrition costs through compensation reviews and work-life balance initiatives

Medical Insurance Cost Analysis & Risk Assessment | [Project](#)

- Analyzed 1,338 medical insurance records to identify cost drivers, revealing smokers pay 3-4x higher premiums than non-smokers
- Established BMI and age as secondary cost factors, with obese individuals facing 20-30% higher medical charges
- Developed risk assessment framework showing lifestyle factors outweigh demographic variables in insurance pricing
- Tools: Python, Statistical Analysis, Correlation Studies, Risk Modeling
- Industry Application: Data-driven approach for premium calculation and preventive care program targeting

Superstore Sales & Profitability Analysis | [Project](#)

- Analyzed dataset of 9,994+ retail transactions using Python to identify sales trends and profitability drivers across product categories and regions
- Created interactive visualizations revealing Technology products generated highest margins (16.3%) while Furniture underperformed (8.5%)
- Developed discount impact analysis showing discounts above 40% resulted in negative margins, providing data-driven pricing strategy recommendations
- Tools: Python, Pandas, Matplotlib, Seaborn, Jupyter Notebook
- Key Insight: Identified 20% of customers generated 60% of revenue, enabling targeted retention strategies

Telecom Customer Churn Prediction Model | [Project](#)

- Built machine learning models to predict customer churn using telecom data of 7,043 customers, with Random Forest achieving AUC score of 0.84
- Identified key churn drivers: month-to-month contracts (42.7% churn vs. 2.8% for 2-year contracts) and electronic check payment methods (45.3% churn)
- Developed feature importance analysis showing contract type and tenure as strongest retention predictors
- Tools: Python, Scikit-learn, Random Forest, Logistic Regression
- Result: Model enabled early identification of at-risk customers for targeted retention campaigns
